

TourSketch

Killer photo tours on interactive floor plans

- Automatic square footage calculation
- Assign unlimited photos to each room you define, which are automatically uploaded to the listing online
- Photos are embedded into the floor plan tour and display when the viewer clicks on the corresponding room
- Identify room features
- One-click line editing, and full Undo/Redo eliminates having to open and redraw lines and areas
- Build QuickLists to make data entry as simple as “tap and go”
- Add symbols for furniture, landscaping, appliances, plumbing, windows, doors and more

Saving you time to focus your attention elsewhere

- Establish a tour sketch before ever leaving the property, by drawing the sketch once in the field, never having to transcribe later
- Keep photos, notes, sketches and listing data all together and organized in a single file for each property on your computer
- Instantly know the square footage before leaving the property
- File management tools allow you to manage listings in customizable folders and subfolders
- Each listing's data, photos, floor plan tour, sketch, and notes are contained in a single file
- Copy or remove files to removable devices such as portable HD, Flash Memory, memory Stick, SD, XD, Zip drives, Thumb drive, or any other using the DaVinci File Manager
- Communicate with your XSite or Single Property site from DaVinci to check e-mail, calendar, leads, and upload

Effortless, elaborate sketching

- Simply draw sketches using your mouse, keyboard commands, or by hand using a digital pen on a Tablet PC for ultimate convenience
- Handwritten inputs work for all drawing functions including walls, curves, and angles when you're using a Tablet PC
- Annotate wall length by writing the value over it by hand, which also will automatically and accurately adjust
- Predefined text databases save time on data entry. Just tap or click to select the desired text from the dropdown
- Text databases are completely customizable, with no limit
- Enter text for a field only once, and save it for reuse thereafter
- Gesture support is built-in allowing

for handwriting commands to be executed, such as “S” for south or “Bas” for basement

- Sketches may be saved or exported in multiple formats such as JPG, BMP, GIF, HTML, and more
- Import sketches from Apex format
- Send measurements straight to DaVinci from your handheld Disto Lasermeter without ever touching the screen

Professional looks, and easy to use features

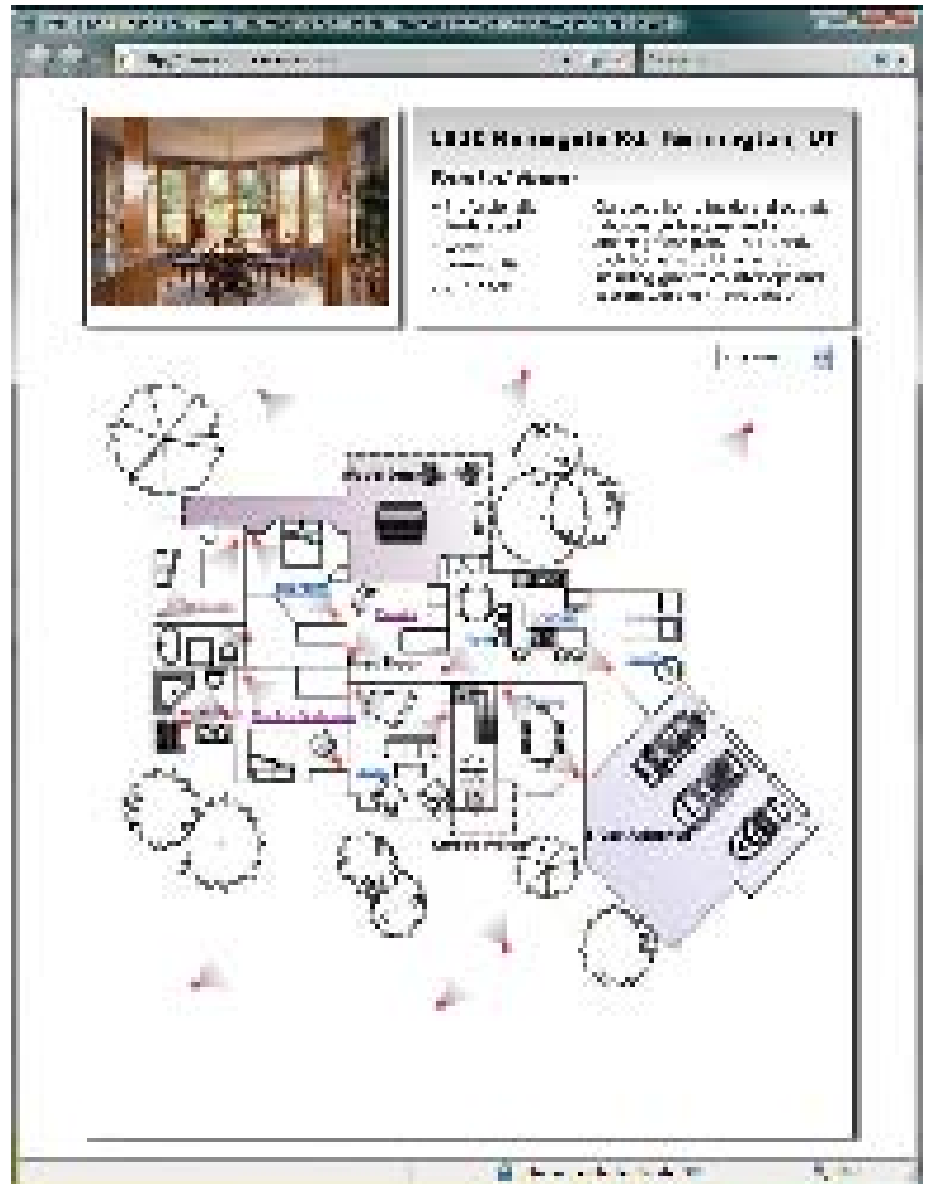

- Sketch, photos, and data you enter combine automatically into an interactive floor plan tour that can be hosted online, which may be previewed right in DaVinci and uploaded to your XSite

listings and floor plans

- Create Single Property XSite from scratch using the listing data gathered in DaVinci and push the listing data, along with the floor plan tour, up to the new Single Property XSite and automatically activate it

Unlimited compatibility for ease of use and better performance

- Seamlessly uploads to your XSite or use with any other website
- Easily append a floor plan tour to an existing listing on your XSite
- Create an unlimited number of floor plans to add to any pre-existing listing
- Add as many photos as you want to your listing. No limit
- Attach a photo to each room you define and all photos are uploaded to the listing online
- Photos are embedded into the floor plan tour and display when the viewer clicks on the corresponding room
- Use your mouse, keyboard, or digital pen on any desktop, laptop, or tablet PC to receive immediate results
- The only desktop sketcher of its kind for real estate professionals Certified for Windows Vista
- DaVinci TourSketch also runs on Windows XP, Windows XP Tablet PC Edition, and Windows 7
