

DaVinci for Tablet PC

Boost accuracy in the field, eliminate retyping in the office

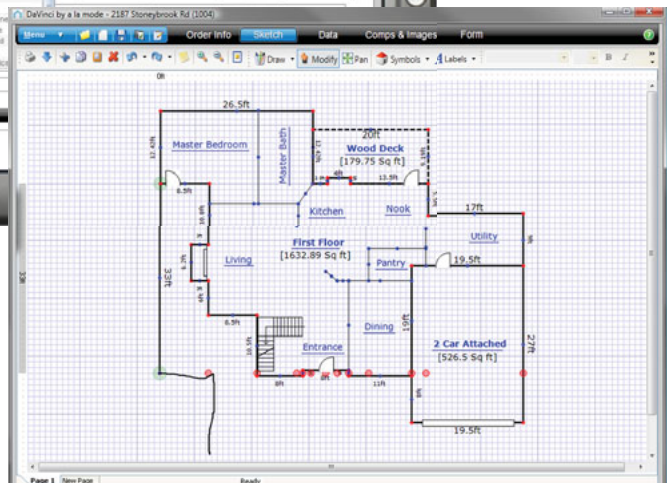

Works with Tablet PCs

- Using a Tablet PC with DaVinci, you can work as if you were using a pencil and clipboard.
- Handwriting seamlessly converts into digital data
- Use your own handwriting to draw sketches, annotate notes, and send software commands
- Data entry can be faster than typing, using predefined QuickLists for each field. Just tap to select the desired text from the dropdown
- QuickLists are completely customizable, with no limit
- Enter text for a field only once, and save it for reuse thereafter
- Import your QuickLists from WinTOTAL
- DaVinci also works with Desktop Computers and Notebooks, using a mouse and keyboard

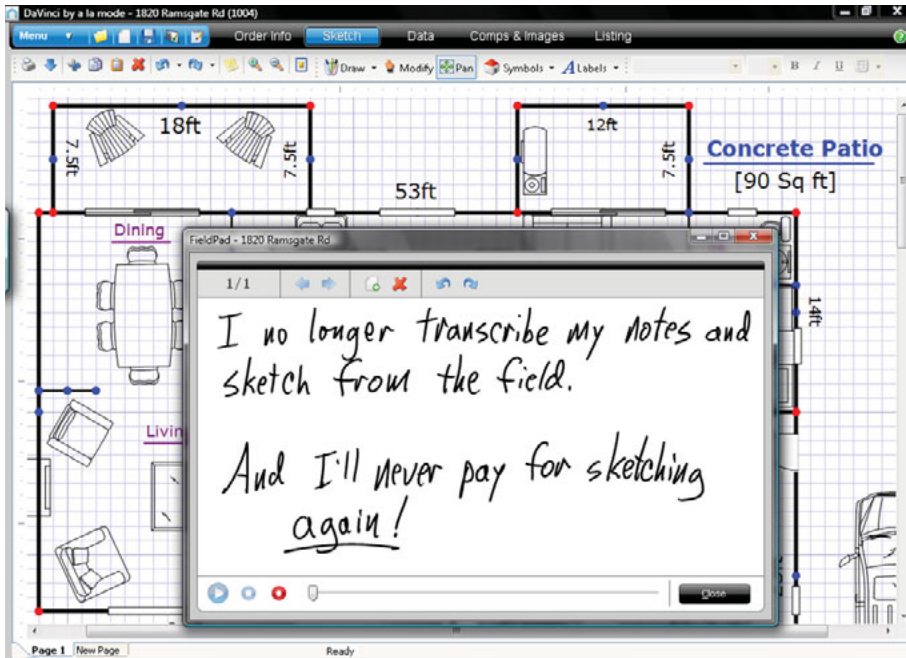

Every data gathering component in DaVinci Mobile is 100% customizable, to fit your preferred workflow. You can even customize your own Critical Fields list of things to record while on-site.

When it comes to sketching, DaVinci Mobile works just like pencil and graph paper. Draw your floor plan by hand in DaVinci and watch it snap instantly into exact lines and calculated areas.

Sketching

- Draw sketches just like using paper and pencil
- Rough in the walls by hand and watch them snap into real lines like magic
- Annotate wall length by writing the value over it by hand.
- Annotations adjust automatically and accurately
- Handwritten inputs work for all drawing functions
- Including walls, curves, angles, rise, run, room labels
- Gesture support is built in
- Use handwriting commands without the need to select a toolbar or menu item
- For example, write in "S" for South; "Bas" for "Basement"
- Unlimited customizable area types
- Create unlimited area definitions
- Each area can have its own customized set of properties:
- Fill color, Fill pattern, Line color, Line pattern, Gradients
- Artificial Intelligence makes cutting out new areas from existing ones easier.
- Break out a garage from an existing first floor by drawing the single wall that separates the two areas. No need to trace
- DaVinci will automatically try to guess what type of area you're drawing based on the where and how you drew it, and automatically define it for you. DaVinci can detect when you're drawing a garage, patio, or open to below area.
- Super simple editing
- To change the length of an existing wall, simply select it and enter a new value. No more "reopen, backspace, backspace..."
- Each wall segment is editable, as opposed to Apex where the entire sketch is a segment
- This means you can edit on a more granular level without having to delete the entire sketch and start over.
- Fully functional industry standard editing commands
- Copy/paste
- Easiest way to "clone" an area
- Undo/redo
- Backup mistakes one command at a time instead of having to delete the sketch and start over

While sketching, you can also pop up a free-form notes tool, to take note of things you want to make sure you don't forget later. And notice in the screenshot above, you can even take voice notes kept in your file!

- Add interior walls, symbols and text
- Expanded symbol library
- More than 150 symbols, focusing on most requested by appraisers, including French doors and pools
- Includes ceiling fans, light fixtures, autos, furnishings, landscaping, and eraser, and more.
- Includes a completely customizable text label list, and allows unlimited text label placement
- Sketches can be saved or exported in multiple formats
- JPG, BMP, GIF, PNG, TIFF, EMF, EXIF, WMF, HTML
- Bluetooth Disto integration is built-in
- Send measurements straight to DaVinci from your handheld Disto Lasermeter (Model A6) without even touching the screen (include photo of Disto)
- Re-use legacy sketches from other brands, including Apex
- They automatically convert from existing reports.
- Import any Apex file and convert it inside DaVinci
- AX2, AX3, AX4

No double entry of data; everything's kept in one place

- DaVinci saves everything in WinTOTAL file format, so there's nothing to import, export, or convert. You can easily open your file in WinTOTAL when you've returned to the office
- Draw the sketch once in the field. No need to transcribe your sketch when get back to the office
- Instantly know the square footage before leaving the property
- Keep photos, notes, sketch, field inspection data all together and organized in a single file for each report on your computer
- Field data automatically streams into the appropriate place on the report. Notes and other items are automatically kept in the workfile.

Data Gathering

- Fully customizable data gathering screens
- Data screens allow you to easily enter field inspection details and property information

- Customize data gathering screens to work the same way you've always worked in the field
- No limit to the number and kind of fields you can add to any data screen.
- Create your own customizations in seconds
- Remove fields you don't need
- Reorganize them the way you like
- Critical fields help you remember to mark down important items before leaving the property
- Any item can be set as a Critical Field. You decide what's critical, based on your own adopted practice.
- Room properties are also completely customizable
- No limit on the number of room types or room amenities
- You can even add kitchen appliances to a bedroom
- All field data is saved in an outline text file for future reference
- Data can be exported to multiple formats
- PDF, RTF, MS Word DOC

Photos

- Add as many photos to your report as you want. No limit.
- Attach a photo to each room
- Add as many additional photos as you like
- All photos are saved in the file and seamlessly flow into the report when opened in WinTOTAL

Form

- DaVinci Mobile Pro includes a built-in formfiller, so you can continue to fill out the form on-site, or after you have completed the property inspection.
- Formfiller is the new Armstrong engine, build from the ground up in C# (pronounced 'see sharp')
- Import your existing QuickLists from WinTOTAL

- All of the data gathered in the field, along with the photos and sketch, show up in the right place automatically when you click on the 'Form' PowerView
- All major forms are support. Swap between major forms in one click
- QuickLists are supported. QuickLists are shared between data gathering screens and the formfiller
- Full set of editing tools are included in the Form PowerView
- Easily copy or move files to removable devices inside the DaVinci File Manager
- Support for portable HD, Flash Memory, Memory Stick, SD, XD, Zip drives, Thumb drive, or any other removable storage device
- Built in backup
- Communicate with your XSite from DaVinci
- Check e-mail, calendar, orders
- Change order status directly from within DaVinci
- Active internet connection is required to communicate with your XSite

File Management

- File management tools come built in
- Manage files in folders and subfolders
- Completely customizable
- Each property file is saved as file on the computer running DaVinci
- The inspection data, photos, major form selection, sketch, and notes for each listing is contained in that single file (.ZAP format)
- Built in support for removable storage
- DaVinci automatically saves previous revisions of the file, just like WinTOTAL (.BZ format)

Certified for Windows Vista (include logo)

- DaVinci is the only product of its kind built for appraisers that is Certified for Windows Vista
- Only Certified for Windows Vista™ software and devices have undergone Microsoft compatibility tests for ease of use, better performance, and enhanced security on PCs running the Windows Vista operating system.
- DaVinci also runs on Windows XP and Windows XP Tablet PC Edition
